First.js

1.

```js
export let a = 5;

export function test1(){

console.log('hi')

}
```

2.

```js
let b = 5;

function test2(){

console.log('hi')

}

export {b,test2}
```

3.

```js
export default let arr = [1,2,3,4]
```

- By default it uses 'use strict' . no need to use it
- It does not share global scope.
- Each file has only one default export

Second.js

1.

import {a} from './file_path_tofirst.js'

import {abc as myfunc} from ….

myfunc();

2.

import {myvar, myfunc} from '…'

3.

import default_import_var from '..'
